

Deployment Plan

RateMyCampus

Our project is called “Rate My Campus”. It is a website in which one can rate their college campus and write reviews about it.

MICHELLE OBAMA
WASHINGTON D.C.

So far attending the University of Kansas was the best decision I've made in my life. There are great professors in the School of Business at the University of Kansas. [FULL REVIEW](#)

Rate My Campus, Copyright 2016

We used Meteor which is a full-stack JavaScript platform for developing modern web and mobile applications. Meteor includes a key set of technologies for building connected-client reactive applications, a build tool, and a curated set of packages from the Node.js and general JavaScript community.

Heroku

We deployed our web application to Heroku which is a platform-as-a-service tool that allows us to build and manage Rate My Campus easily and efficiently. Heroku has a free plan which is enough for us in the early stages of the app. The free plan comes with deployment tools and a maximum of 10,000 rows in the database.

In the future, as Rate My Campus gains more traction, we plan to deploy the web application using Heroku's Hobby tier which costs \$7/month without any add-ons. We may also consider purchasing the next database option at \$9/month which will grant us 10 million rows.
